R is a free, open-source programming language and software environment for statistical computing, bioinformatics, visualization, and general computing. Please provide minimal and reproducible example(s) along with the desired output. Use ``dput()`` for data and specify all non-base packages with ``library()`` calls. Do not embed pictures for data or code, use indented code blocks instead. For statistics related questions, use <https://stats.stackexchange.com>.

[confirmation on how to interpret MCMCglmm summary output](#)

i want to know if post.mean is similar with estimate result that we see in glm model or different? thus pMCMC can be consider as p-value? i have not found people really explain on summary analysis ...

Repositório CRAN - Pacotes

Como instalar pacotes?

Funções:

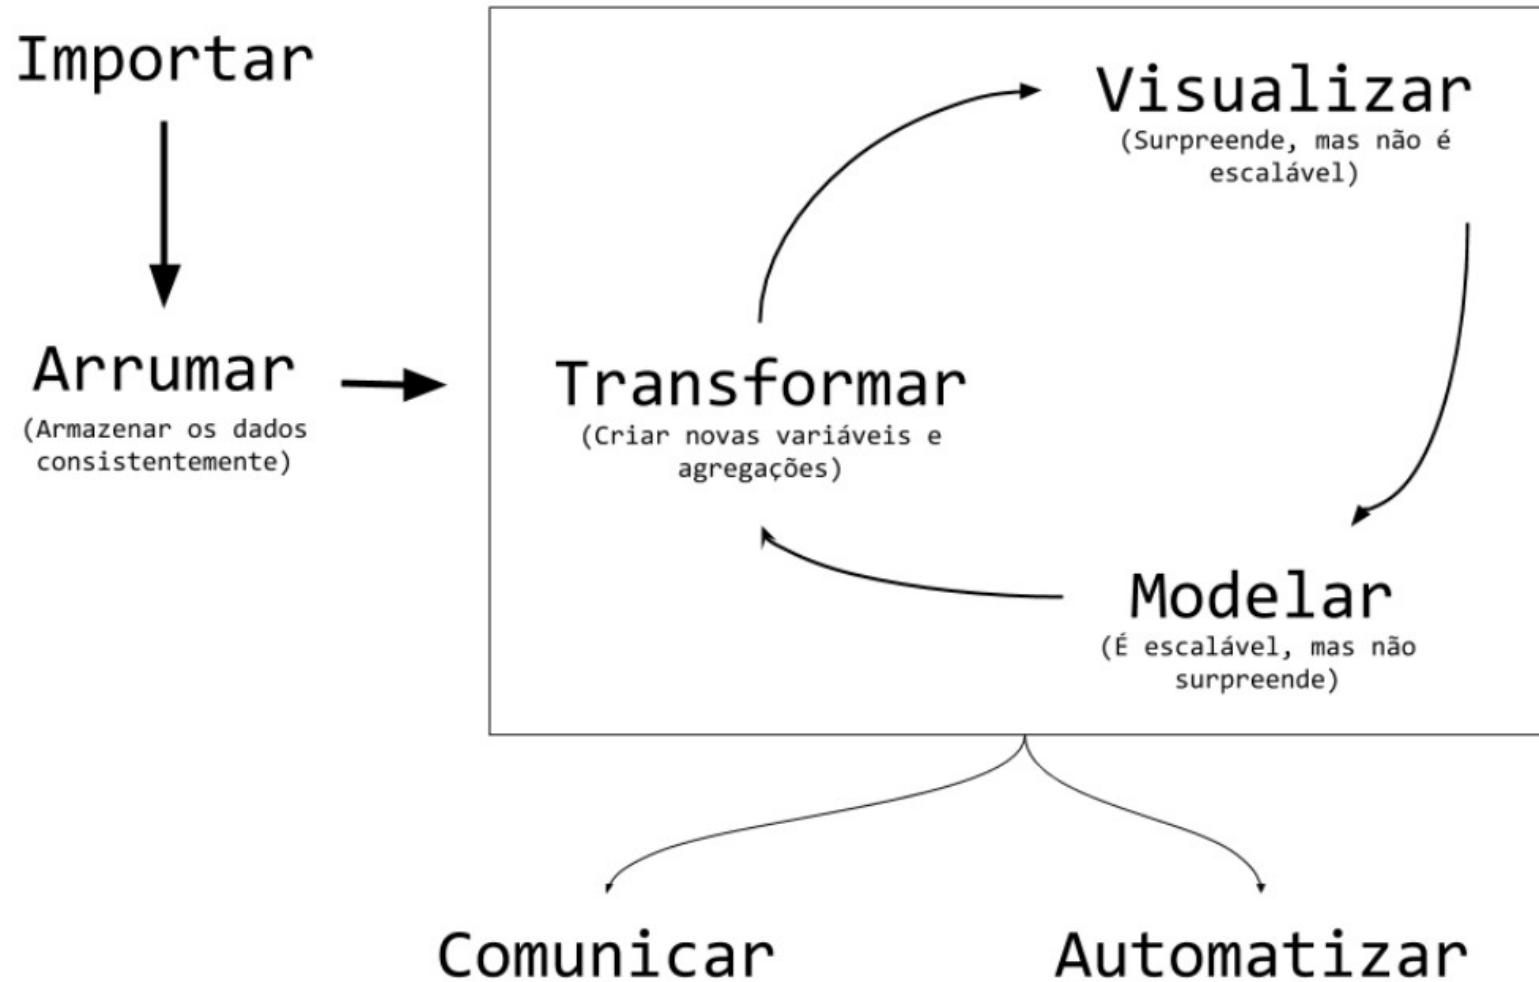

install.packages() – Baixar o pacote diretamente do repositório CRAN

library() – Instalar o Pacote em seu projeto, habilitando para utilização de suas funções

A screenshot of an R script editor window. The window has a light blue header bar with icons for undo, redo, save, and a 'Source on Save' checkbox. Below the header is a toolbar with 'Run' and 'Source' buttons. The main area contains two lines of R code: '1 install.packages("tidyverse")' and '2 library(tidyverse)|'. The status bar at the bottom shows '2:19', '(Top Level)', and 'R Script'.

```
1 install.packages("tidyverse")
2 library(tidyverse)|
```
